

This Caster Kit was design to enable you “the user” to customize inventory items to those that you find most useful for the UI’s I developed. PDF format was selected as a delivery system to provide you with security against installing trojens on your system. This program should not download/execute any files/programs on or to your system.

Use this delivery system at your own risk.
I am not responsible for any problems that may arise through its use.

---If Requested---
DO NOT SAVE CHANGES TO THE PDF FILE. THIS MAY ENABLE SOME OF THE CODE TO WORK INCORRECTLY!

EQUI XML: EQUI_TargetWindow.xml **Additional Files Required:** timer.bmp

DESCRIPTION: The original mod to this target window (a 1 minute timer added along with casting bar) was done by [Xymarra](#). I added the pet bar to the window along with 2 inventory slots. This allows me to keep my focus in one location when I have a charmed pet and click easily on an inventory slot item when needed. The top of the window is the target name with Hp's. At the bottom is the pet bar and in between is the casting bar. To the right is a one minute timer. If you would like to learn more about changing inventory slots in xml then [click here](#) to read a great tutorial by Lunakin.

If your Notepad.exe file is located in directory C:\Windows you can click here to start it.

1. Make sure you back up your original "EQUI_TargetWindow.xml"
2. Open Notepad or any text processing program.
3. Select the inventory items in the drop down lists.
4. Click the **"Run"** then the **"Copy"** button.
5. Wait for the text to highlight.
6. Paste the xml code in your text processing program (Notepad.exe).
7. Save the file as **"EQUI_TargetWindow.xml"**
8. Click the **"Reset"** Button to restart.

Slot 1 Slot 2 Slot 3 Slot 4 Slot 5

EQGUI XML: EQUI_PetInfoWindow.xml

DESCRIPTION: This is my modification to the pet window. I added [Cairenn's](#) pet stats page to [Grimmier's](#) original pet inventory window and customized to my needs.

If your Notepad.exe file is located in directory C:\Windows you can click here to start it.

1. Make sure you back up your original "EQUI_PetInfoWindow.xml"
2. Open Notepad or any text processing program.
3. Select the inventory items in the drop down lists.
4. Click the **"Run"** then the **"Copy"** button.
5. Wait for the text to highlight.
6. Paste the xml code in your text processing program (Notepad.exe).
7. Save the file as **"EQUI_PetInfoWindow.xml"**.
8. Click the **"Reset"** Button to restart.

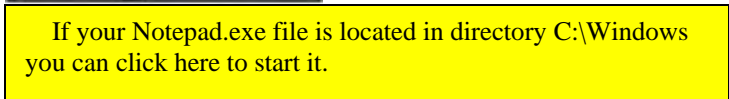

EQUI XML: EQUI_Container.xml

DESCRIPTION: This is my modification to [Cairenn's](#) container mod. I reduced the size of the top inventory slots and made enough room for eight of them. With this modification I have extended my on screen casting abilities by keeping a container up and swapping clickable items in and out of the inventory slots.

The slots are numbered 1-8 starting with the top left to top right.

If your Notepad.exe file is located in directory C:\Windows you can click here to start it.

1. Make sure you back up your original "EQUI_Container.xml"
2. Open Notepad or any text processing program.
3. Select the inventory items in the drop down lists.
4. Click the **"Run"** then the **"Copy"** button.
5. Wait for the text to highlight.
6. Paste the xml code in your text processing program (Notepad.exe).
7. Save the file as **"EQUI_Container.xml"**
8. Click the **"Reset"** Button to restart.

DESCRIPTION: This setup allows me to minimize mouse movement when buffing. The spell cast window and hot button window are the same height and placed side by side in my setup. Hot button 1 is set up with the /rtarget command. To the right of the hot buttons the primary, range and inventory bags are available. Updated August 2003.

1. Make sure you back up your original “EQUI_HotButtonWnd.xml”
2. Open Notepad or any text processing program.
3. Select the inventory items in the drop down lists.
4. Click the “**Run**” then the “**Copy**” button.
5. Wait for the text to highlight.
6. Paste the xml code in your text processing program (Notepad.exe).
7. Save the file as “EQUI_HotButtonWnd.xml”
8. Click the “**Reset**” Button to restart.
